This was what they had been
uncertainty and anxiety was gone.
Looked out at the class the
anxiety was replaced with
expecting. Now the uncertainty and
confusion.

Behind every pair of eyes there was
a chaotic system known as a human
brain. Was the human brain
essentially chaotic or was it only
chaotic as perceived by the human
brain? In the eye of God even the
human brain is simple.

Dr Shengwei turned to the board
and started in on the math. When he
disproved it.
God does not play dice with the
universe. The students were getting
angry. They were expecting math but they
doe

"Is the universe clockwork and
completely predictable? Or is it a
chaotic mess with no prediction
possible? Or is it both? It can't be
both!" you say. But we are looking
through the eyes of man. Maybe the
human mind is the limitation here.
Maybe in the eye of God chaos is
simple."

"For a while there the universe was
clockwork. All cause and effect.
Every action had an equal and
opposite reaction."

Dr. Shengwei was lecturing his
class. Physics 101. He hadn't started
in on the math yet.

"But the more we tried to describe
the more complicated the
descriptions became. The systems
outpaced our equations. We could
no longer make valid predictions.
Since we saw chaos we described it
as chaos. Chaos Theory became the
new thing. But it was more of an
excuse for why our predictions were
failing than a way to make
predictions."

a man or woman could prove or
could be proved or not. At least until
statement that hadn't been proven
Only God would know whether a
to distinguish between the two.
also showed that there was no way
yet been proven or disproven. Gödel
disproven and statements that hadn't
statements that can't be proven or
axiomatic algebra, There would be
itself, even systems as simple as
system complex enough to describe
"Gödel proved that in any formal
about God.
they would wish he was still talking
